Electronic content: springerlink.com

Will publish
Open Access for
the first year!!!

Archaeological and Anthropological Sciences aims to publish articles covering the full spectrum of natural scientific, archaeometric methods, which are now a fundamental part of modern archaeological research, with the emphasis on the archaeological contexts and the questions being studied. In this way it aims to bridge the gap between archaeologists and natural scientists providing a forum to encourage the continued integration of scientific methodologies in archaeological research. Topics include: Archaeology, Archaeozoology and Archaeobotany Geological and Geophysical Prospection, Geoarchaeology, Geochronology, Genetics and other Biomolecules, Material Analysis and Conservation Science and Palaeoanthropology.

The journal is endorsed by the the German Society of Natural Scientific Archaeology and Archaeometry (GNA), the Hellenic Society for Archaeometry (HSC) and the Association of Italian Archaeometrists (AIAR) and will be published quarterly with each issue including invited review articles focusing on the many facets of archaeological and anthropological science, either in terms of a particular methodology or the archaeological/anthropological questions being asked.
